01 START HERE

The commands you will use most

Ask, troubleshoot, configure, and keep the conversation moving.

ASK & EXPLORE

> hm "your question"
Ask one question in plain language.

> hm --query "question"
Same one-shot flow; -q works too.

> hm --chat
Start a conversation about terminal work.

> hm --help | -h | /?
Browse examples, commands, and keyboard hints.

SET UP YOUR WORKSPACE

> hm --setup
Open Settings at General.

> hm --ai-setup | --ai-settings
Open Settings at AI.

> hm --theme
Preview and change terminal colors.

> hm --test-ai
Check that the selected model can answer.

FIX & CREATE

> hm --diagnose "error"
Explain an error and suggest next checks.

> hm --diagnose --file build.log
Analyze a log file after local redaction.

> Get-Content build.log | hm --diagnose
Pipe a focused log excerpt into hm.

> hm --script "your request"
Draft a script for you to review.

> hm --script ... --file old.ps1
Revise an existing script with a diff.

> hm --script ... --output new.ps1
Choose a new output filename.

CHECK & REMEMBER

> hm --status
See settings and local storage readiness.

> hm --costs
Review usage and estimated costs.

> hm --where | -where
Show the running executable and its folder.

> hm --version | -v
Show app, .NET, and platform versions.

> hm --remember "note"
Save an exact note for future conversations.

> hm --memories
Open the local saved-memory manager.

> hm --forget "id or description"
Find a note, then confirm its deletion.

GOOD FIRST RUN

> hm "How do I list the largest files here?"

You see the answer before any suggested command is reviewed or run.

02 GO FURTHER

Advanced workflows and control

Preview file effects, resume plans, tune behavior, and get support.

CONTROLLED EXECUTION

> hm --direct "request"
Force reviewed direct execution this session.

> hm --preview rename --file ./logs ...
Preview a local batch rename.

> hm --preview copy --file a --output b
Preview a copy without changing files.

> hm --preview move --file a --output b
Preview a move without changing files.

> hm --preview delete --file ./logs ...
Preview exactly what deletion would affect.

PLANS, SKILLS & LEARNING

> hm --plan "your goal"
Create reviewable, ordered PowerShell steps.

> hm --plan --resume <id>
Continue a saved plan in its original folder.

> hm --skills
Choose opt-in skills in an interactive screen.

> hm --learning
Manage reviewed memory collection.

> hm --dream
Review suggested memory changes.

> hm --heartbeat
Open the opt-in heartbeat workflow.

> hm --proposals
Open proposed memories for review.

INSTALL & SUPPORT

> hm --path status
Check whether this hm folder is on PATH.

> hm --path install | remove
Review a persistent user PATH change.

> hm --install-font --dry-run
Preview the optional font helper.

> hm --prepare-logs
Create a redacted support ZIP locally.

> hm --third-party
List runtime packages and licenses.

> hm about | hm --about
Read project, author, and license details.

GLOBAL SWITCHES

> --language <code> | -l <code>
Use it, en, fr, de, es, or vi for one run.

> --no-animation
Turn off optional progress animation.

> --no-emoji
Use plain text symbols in the terminal.

> --yes | -y
Approve reviewed PATH or font operations only.

INSIDE CHAT

> /run <command>
Review a command, its risk, and its output.

> /status | /context
Show context, budget, notes, and usage.

> /costs
Open the cost dashboard without leaving chat.

> /clear
Start fresh while keeping notes and usage totals.

> /exit
End the conversation.

SAFETY RULE

> --yes never approves chat commands

Every /run command still uses the active session's authorization gate.
